

SEEN PEDESTRIAN DETECTION

SAFETY IS NOT NEGOTIABLE

SEEN Sensors make pedestrian detection easy by detecting the reflective tape on high-vis safety vest. If a pedestrian gets too close, they and the driver receive an audible alert.

SEEN's unique IRIS technology detects reflective tape on high-visibility safety gear, transforming the standard high-vis vest into part of an active pedestrian detection system.

Typical forklift setup

- IRIS 860 sensors
- Detection targeted to the rear of the machine
- Detection range set to 3 metres
- Pre-alert range set to +0.5m
- Detection alert only when reversing
