

Improvement results using "Horizontal Checker"

Had a hard time loading and unloading many time at high place, because I can't figure.

After the introduction

With "Horizontal Checker", we can always know the fork's angle and handling **more efficiently**. We always check "Horizontal Checker" when handling **at high place**.

We sometimes insert long fork into the narrow frontage pallet. Then we occasionally damaged the pallet because we recognized the fork is horizontal but actually it was not.

After the introduction

By following the horizontal line of "horizontal Checker", **we can insert fork to the depth of pallet**, as a result damaging accidents decreased.

After handling freight at high place and when we eject fork from the pallet, the freight was caught by fork and dropped accidentally.

After the introduction

Cause of this accident was misrecognition of fork angle so we introduced "Horizontal Checker". When you handle at high place, **we can check the fork angle at the level of eyesight**, so it's lead to **preventing accident**.

Since I have just gotten forklift license, it is difficult for me to figure whether fork is horizontal or not from driver's seat. I'm still unfamiliar with handling.

After the introduction

Very easy to handle because it **indicates fork angle timely**.

[Precaution for use]

- Please note that this product is to visualize fork angle, not to measure angle.
- It's not a product to ensure safety, so we will not bear any responsibility in case of accident.
- This is only for counterbalanced forklift, not for reach forklift.
- Please don't use under -20°C or over 80°C environment.
- Please keep indoor.
- If the magnet is dirty, there is a risk of drop. Please wipe cleanly before using.
- If accidentally you drop the product, lift the fork to the level of one's eyesight and please make sure that the fork and the pointer's horizontal position correspond before using.
- Put the guide part along mast.

CAUTION!

Our products are protected by utility model rights, trademark registration, patent rights, unfair competition prevention law, and copyright. If we find any acts that violate these rights or illegal activities, Please note that we will deal with this through the Association for Prevention of Imitation.

The industry's first innovation

Angle confirmative attachment for counterbalanced forklift

Horizontal Checker

LC-1000

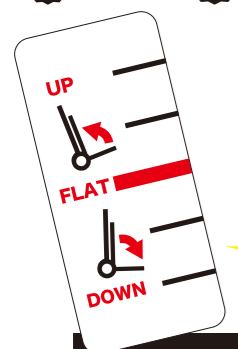

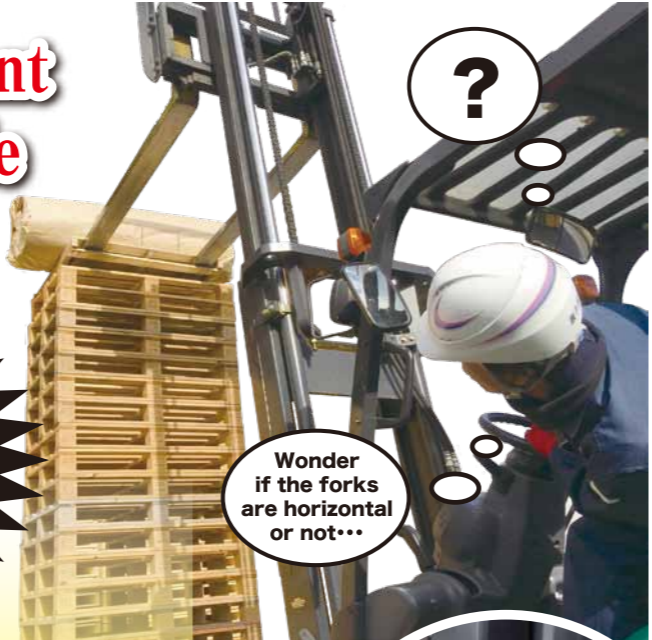

Makes the forks angle visible

Drop accident and break accident due to unknowing the fork angle

Drop and break of freight

Horizontal Checker

This is the SOLUTION!!

Characteristic of "Horizontal Checker" which is focused on the operability

Feature 1 Easy to visualize fork angle!

Grasp mast tilt clearly and the pointer goes up and down following the fork's angle change

爪の角度が見えにくい高所でも目線に位置で確認できる。

Feature 2 Easily attach with magnet

Backside is strong magnet. You just put the guide part along the mast. You can attach and detach any number of times

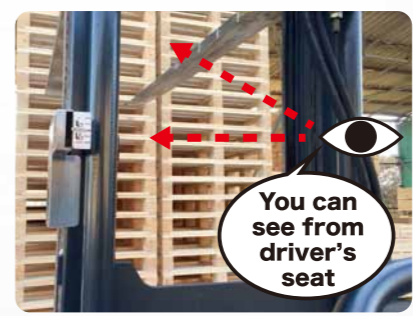

Feature 3 All made by stainless steel

you can use in case of rain.

Horizontal Checker is useful in the following situation!

CASE.1 For loading and unloading at high place!

Even the fork is above your head you can check if it is horizontal or not. You can insert and remove smoothly at high place.

CASE.2 For support for beginner forklift driver!

"Horizontal Checker" help beginner forklift driver handle more safely.

CASE.3 When insert fork to the depth through narrow frontage!

When the frontage is narrow it's afraid of hitting pallet, but in such case if you know the fork is horizontal, you can insert fork to the depth smoothly.
